

The Ekmelos Font

Version 1.14

Ekmelos is a Unicode typeface for the notation of microtonal music, in particular in the 72-tone equal-temperament system (72-EDO, Ekmelic System), as well as in the included sixth-, quarter-, and third-tone systems (36-,24-,18-EDO). It is designed above all for use together with Ekmelily for which it is the default font (also this document has been created with LilyPond and Ekmelily, not with a text processor.) It is in development.

The latest version 1.14 contains 318 characters, primarily accidental symbols representing semi-, third-, quarter-, sixth-, and twelfth-tone degrees. The standard 12-EDO accidentals (sharp, flat etc.) correspond to the Feta font in LilyPond . Many others are arrow-like signs, upward and downward, to be placed either alone or in combination to the left of a standard 12-EDO accidental. Also Basic Latin (ASCII) punctuation marks and lowercase letters are included for use as alternative accidentals.

The character encoding is compliant with SMuFL version 1.20 (The Standard Music Font Layout is a specification for music symbols, developed by the W3C Music Notation Community Group . It uses the Unicode Private Use Area (PUA) in the Basic Multilingual Plane (BMP) starting at code point U+E000.) But it currently does not meet all the SMuFL guidelines for the font metrics. Note: The Ekmelos/Ekmelily versions prior to 1.0 are not compliant with SMuFL.

Ekmelos is created with FontForge , 2.0.

It is released under the SIL Open Font License , version 1.1.

More information about Ekmelic Music can be found at www.ekmelic-music.org .

Tables of Characters

Please find in the following tables all characters defined in the Ekmelos font. This is an extended subset of the “recommended characters” in SMuFL. The characters are grouped by Ekmelily's predefined notation styles as well as by SMuFL classes and Unicode ranges whose characters are for the most part not used in the predefined notation styles. Each group is sorted by code points. Some characters appear in several groups. However, the Standard accidentals which appear in almost every notation style are listed only in the respective SMuFL class. For each character, its Unicode code point (decimal and hexadecimal) and its name (canonical glyph name or Unicode character name) are specified. Starting at code point 62976 (U+F600), the font includes “optional glyphs” that are used in predefined notation styles, but not defined in SMuFL (this applies to the Richter Herf / Maedel notation and the Ligatures for the Sims notation).
